

The magnetically suspended piston moves precisely in response to amplified audio signal input. This 3.25 lb mass generates tremendous force that is accurately transferred to whatever the housing is attached to.

Better by Design

The ButtKicker® is in a class of its own.

Based on a revolutionary, patented design that is more musically accurate, more powerful and longer lasting than voice coil shakers and other tactile devices, the ButtKicker allows you to feel powerful bass without excessive volume.

The ButtKicker is virtually indestructible and maintenance-free, with many thousands of units in service for over six years... without failure.

The ButtKicker family of low frequency transducers is used by the world's most demanding customers - IMAX, Disney, Universal Studios, professional and amateur musicians, theme parks and attractions, home theater professionals and enthusiasts, computer and console gamers and car audio installers.
